

GENIE

Google Gemini Powered Learning Assistant

Project Documentation Phase

Preparing complete and organized project records

Project Phase Documentation

This document covers the activities, outputs, and considerations for this phase of the Genie project.

1. Documentation Structure

Genie – Project Documentation Phase

- Project title and introduction.
- Problem statement and project objectives.
- Brainstorming and ideation details.
- Requirement analysis and selected technologies.
- System design, architecture, and workflow.
- Development process and implementation details.
- Testing approach and results.
- Conclusion and future enhancement ideas.

Aspect	Details
Purpose	Preparing complete and organized project records
Project	Genie: Google Gemini Powered Learning Assistant
Technology	Python + Google Gemini integration
Target Users	Students / learners

2. Evidence & Technical Records

Genie – Project Documentation Phase

- Include relevant screenshots of the application interface and important development stages.
- Document the development environment and major dependencies.
- Explain the Gemini integration at a high level without exposing private credentials.
- Record test cases and observed results.
- Keep source-code files organized with meaningful names and a clear project structure.
- Maintain the final repository and documentation consistently.

Key Note: The exact implementation can be adjusted based on the final project code and available Gemini API configuration.

3. Final Documentation Quality

Genie – Project Documentation Phase

- Use consistent headings, formatting, and terminology throughout the document.
- Explain technical concepts in language appropriate for the intended audience.
- Check spelling, grammar, screenshots, page numbering, and references before submission.
- Ensure that documentation matches the actual implementation of Genie.
- Prepare a concise conclusion describing what was developed and what can be improved in future versions.

Phase Output: A clear, reviewable result that can be carried forward to the next project phase.
