

GENIE

Google Gemini Powered Learning Assistant

Project Demonstration Phase

Presenting and demonstrating the completed Genie project

Project Phase Documentation

This document covers the activities, outputs, and considerations for this phase of the Genie project.

1. Demonstration Preparation

Genie – Project Demonstration Phase

- Verify that the final application runs correctly before the presentation.
- Prepare the project title, objective, problem statement, and key features.
- Keep the required development files and configuration ready.
- Use safe demonstration credentials or environment configuration and never expose private API keys.
- Prepare a few representative learning prompts for the live demonstration.

Aspect	Details
Purpose	Presenting and demonstrating the completed Genie project
Project	Genie: Google Gemini Powered Learning Assistant
Technology	Python + Google Gemini integration
Target Users	Students / learners

2. Demonstration Flow

Genie – Project Demonstration Phase

- Introduce Genie: Google Gemini Powered Learning Assistant.
- Explain the problem it addresses and the target users.
- Briefly describe the architecture and technology stack.
- Open the application and enter a sample learning question.
- Show how the prompt is processed and how the generated response appears.
- Demonstrate one or more learning-support features within the project's actual scope.

Key Note: The exact implementation can be adjusted based on the final project code and available Gemini API configuration.

3. Conclusion & Future Scope

Genie – Project Demonstration Phase

- Summarize how Genie combines a student-friendly interface with Gemini-based AI assistance.
- Mention the major development, testing, and documentation work completed.
- Discuss practical limitations, such as dependence on internet connectivity and the configured AI service.
- Future scope may include conversation history, improved personalization, additional learning tools, multilingual support, and stronger response evaluation.
- End the demonstration by highlighting the completed working workflow and answering questions about the project.

Phase Output: A clear, reviewable result that can be carried forward to the next project phase.
